Objective:

An ambitious and enthusiastic international student doing a **Computer Programming diploma** at Georgian@ILAC college. Proficient in programming languages such as **Python, Java, C/C++, SQL, PHP, HTML5, CSS, JavaScript** and having a strong understanding of **data structures and algorithms**. Possessing a proven record of solving over 250 programming questions on LeetCode, and the ability to apply technical skills to develop interactive projects using **Python and React.js**. Seeking opportunities to continue growing my technical skills and gain practical experience in the technology industry.

Coding Knowledge:

Languages: Python, Java, PHP, C#, JavaScript, SQL, C/C++, HTML, CSS.

Frameworks: React.js, Django, Django Rest Framework, Redux.js, ASP.Net, Tailwind CSS, Bootstrap.

Data Models: JSON, Relational, Graph, RESTful APIs.

Server/Databases: MySQL.

Tools: Photoshop, figma, Microsoft Azure.

Education:

Computer Programming Diploma at Georgian@ILAC (September 2022 – April 2024)

- Specialized in **Java, mathematics, IoT, python and advanced HTML, CSS, JavaScript** concepts.
- Developed practical skills in creating **Graphical User Interfaces (GUI)** using **JavaFX** and **Object-Oriented Programming (OOPs)**.
- Acquired an in-depth understanding of **advanced database concepts**.
- Current GPA: **94.75**.

Experience:

Peer Tutor at Georgian@ILAC (February 2023 – Present)

- Helped more than 20 students in learning and mastering programming concepts through **personalized instruction** based on student requirement and diverse, **effective coding techniques**.
- Empowering students to write code confidently and efficiently, **elevating their skills** to the next level.

Team Member at Tim Hortons (October 2022 – Present)

- **Collaborating** effectively with team members to ensure the delivery of exceptional customer service.
- Working in **high-pressure situations**, such as managing the drive-thru service within strict **time constraints**.
- **Communicating** in the best way with more than 100 customers weekly to accurately understand their needs, resulting in the provision of **high-quality, personalized service**.
- Demonstrated **leadership** abilities through training more than 10 new Team members.

Personal Projects:

The Cinephile Hub

- Developed a **React application** displaying movies and TV shows information, utilizing **Axios** for **API** data fetching.
- Managed data state using **Redux Toolkit** and crafted a user-friendly interface with **Tailwind CSS**.
- Designed **dynamic components** like **Carousel component** for appealing data presentation.
- Live at: [thecinephilehub](https://thecinephilehub.com).

Note Taking App

- Developed a **full-stack application** using **React.js (frontend)** and **Django Rest Framework (backend)**.
- Implemented **JWT-based** user authentication.
- Used **Private Route** to restrict user from Certain pages.
- For making **API calls** to the **backend**, I utilized **Axios**.
- Utilized **React Context API** for centralized state management.
- Integrated **Twilio API** for SMS reminders.
- GitHub link: [Note app](#).

Discord Clone Application (Django Project):

- Developed a group discussion platform using **Django**.
- Integrated Django's **MVT model and template engine** for **CRUD** operations and **data handling**.
- Managed various **relationship models** and used Django's **ORM**.
- Implemented a **custom user authentication model**.
- GitHub Link: [Coding Group](#).

Personal Portfolio Website

- Portfolio website using **HTML5, CSS3 and JavaScript**.
- Compatible with mobile phone screens or any kind of screen.
- Used modern CSS techniques and **media quires**.
- website link: [Portfolio](#).

Shortest Path Finder (BFS Simulation)

- Demonstrates the implementation of **BFS (Breadth First Search)** to determine the shortest path on a grid, structured as **graph**.
- Use of the **python curses module** to visually display the working of BFS in the terminal.
- GitHub link for project: [BFS](#).

Pong Game with AI

- Developed using the **Pygame module**.
- Implemented **NEAT (Neuroevolution of Augmenting Topologies)**, a technique that uses **artificial neural networks** that improve over generations to achieve optimal results.
- GitHub link for project: [Pong Game](#).
